

# WHAT WE BELIEVE:

## PROFESSIONAL BELIEFS ABOUT DEAFNESS AND WHAT FAMILIES WANT US TO KNOW

Emily (Wojahn) Small, MA (she/her)  
Nicole Hutchinson, MA, CED (she/her)

# WHO IS IN THE ROOM?

EARLY INTERVENTIONISTS

EHDI STAFF

SPEECH-LANGUAGE PATHOLOGISTS

DHH ADULTS

AUDIOLOGISTS

EDUCATORS

FAMILY MEMBERS

MEDICAL PROVIDERS

## WHO ELSE?

# COMMUNITY NORMS

BE CURIOUS  
AND OPEN TO  
LEARNING

ASSUME  
GOOD  
INTENTIONS

RECOGNIZE  
YOUR OWN  
PRIVILEGE  
& BIASES

RESPECT  
OTHERS  
VIEWS AND  
OPINIONS

AGREE TO  
DISAGREE

BE  
PRESENT

- 

**WHO'S EVER BEEN  
AFRAID OF SAYING  
THE WRONG THING?**

YES

NO

I have participated in discussions  
about professional bias.

YES

NO

The resources my field shares  
with families are free from bias.

YES

NO

I am comfortable communicating about  
my professional biases with my  
colleagues and other professionals I  
work with.

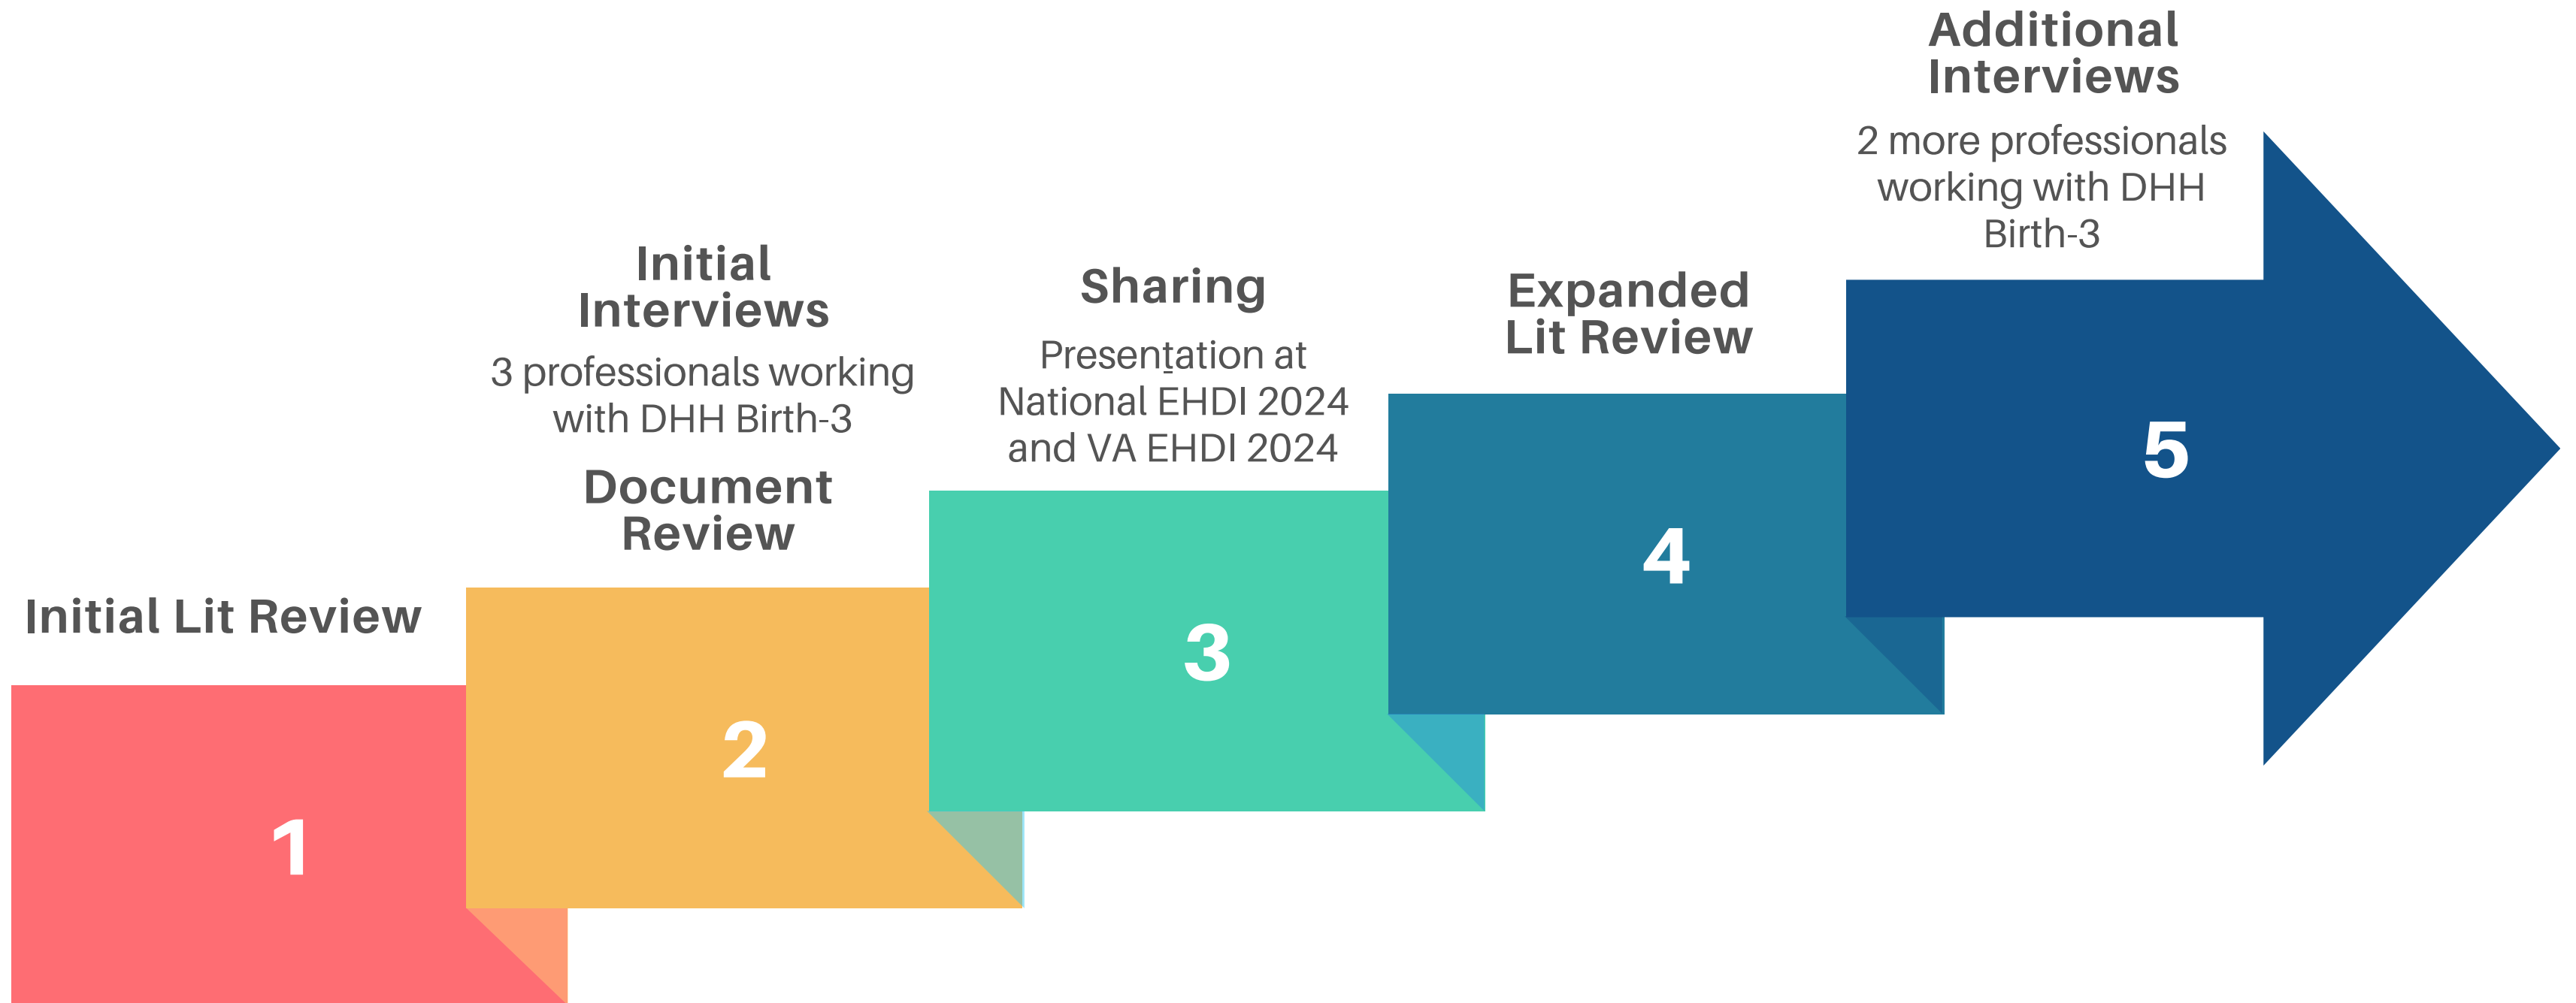

YES

NO

I am comfortable communicating about  
my professional biases with the families  
I work with.

# BACKGROUND:

# LITERATURE REVIEW - THEMES

## FAMILY EXPERIENCES

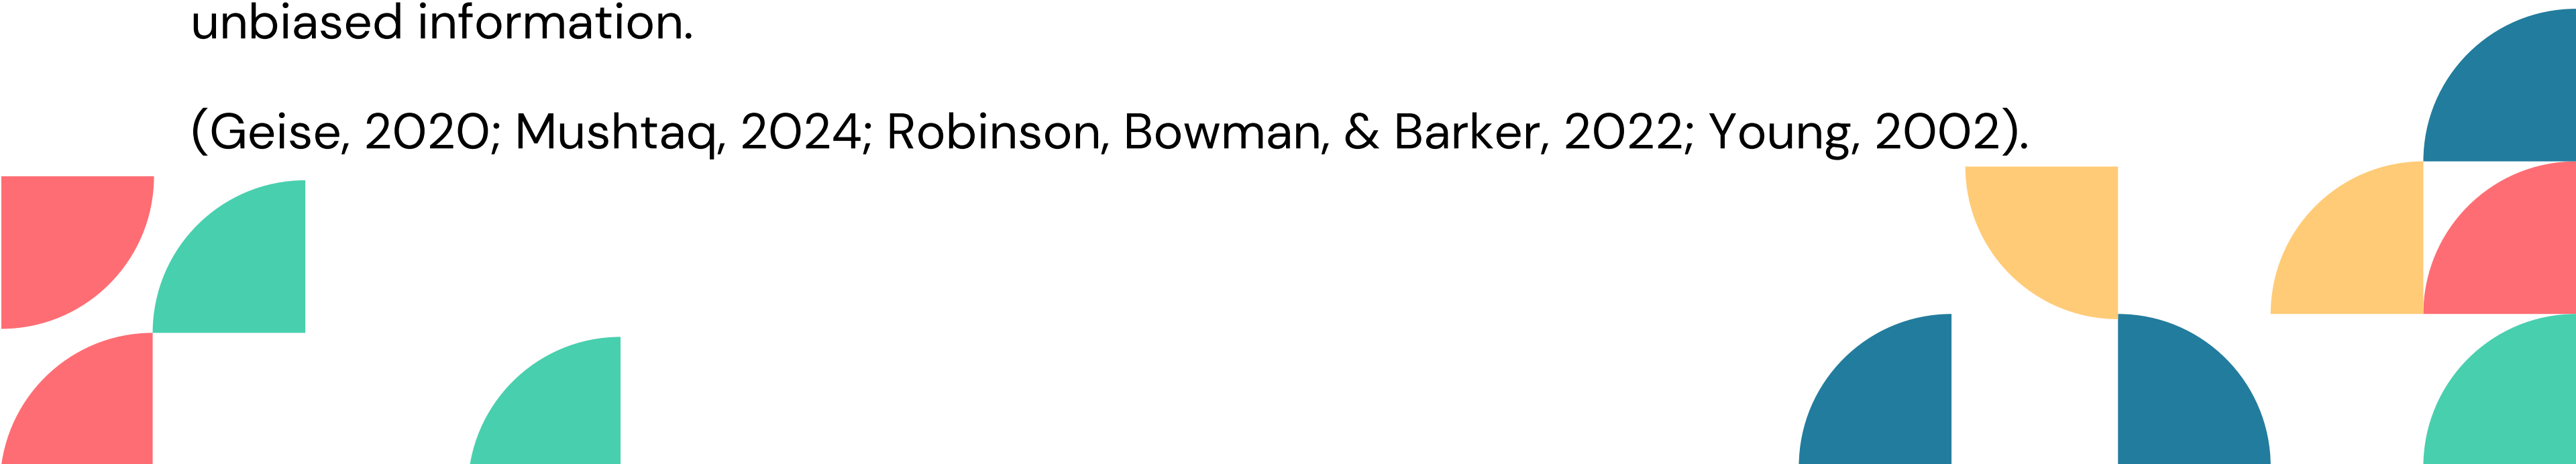

Families want the care they receive to be focused on the skills the professional brings, clearly and empathetically communicated, without bringing the focus to the clinician.

(DesGeorge, 2016; Eleweke & Rodda, 2000; Robinson, Bowman, & Barker, 2022; Tattersall & Young, 2006).

## PROFESSIONAL COMMUNICATION

Families receive information from varying sources of information with higher regard often placed on medical professionals. Professionals should use communication that is sensitive, patient, and open understanding that information delivered without counseling or emotional support leaves parents with limited understanding of next steps and difficulty finding unbiased information.

(Geise, 2020; Mushtaq, 2024; Robinson, Bowman, & Barker, 2022; Young, 2002).

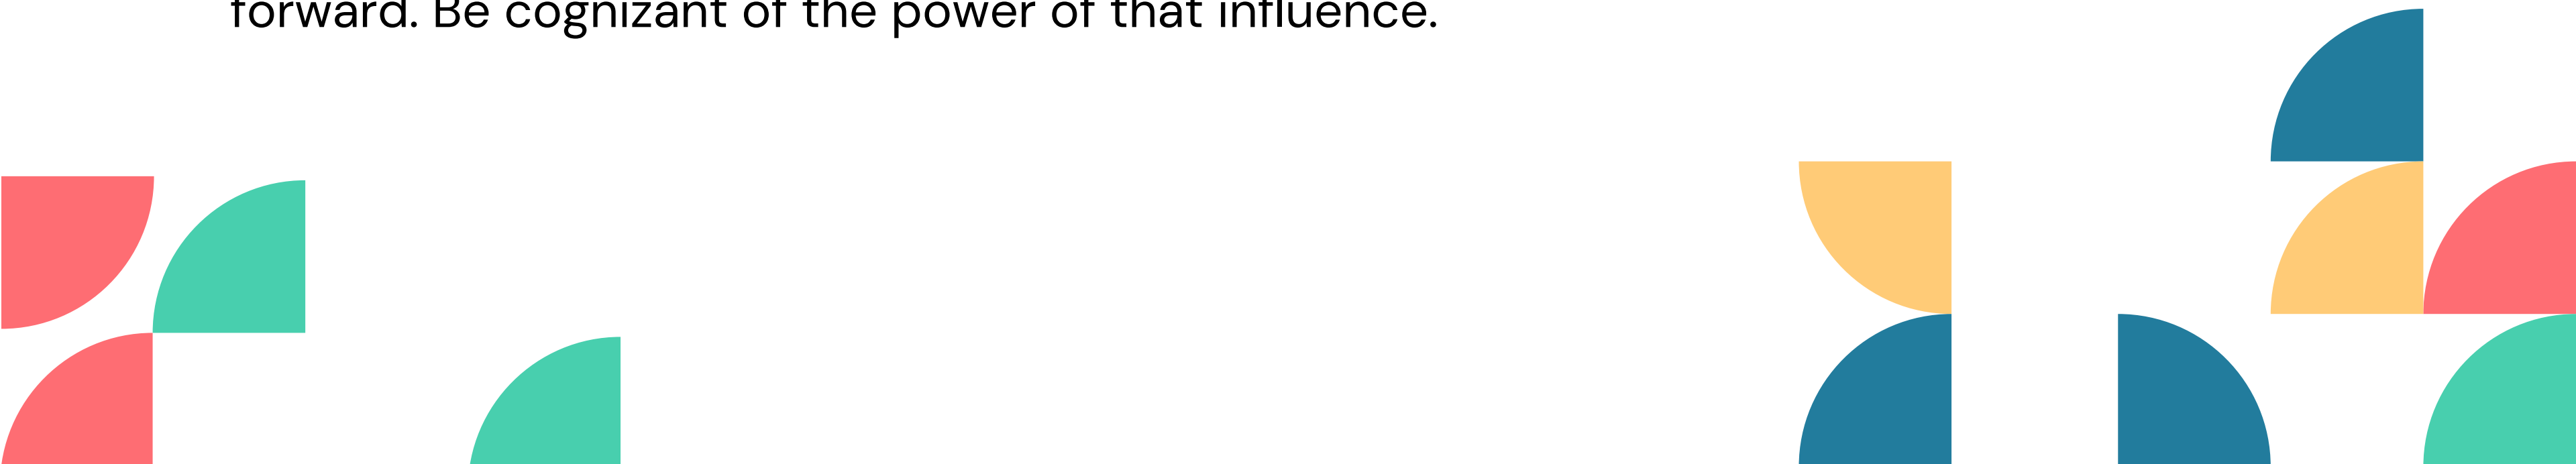

# LITERATURE REVIEW - THEMES

## CHANGING PERSPECTIVES

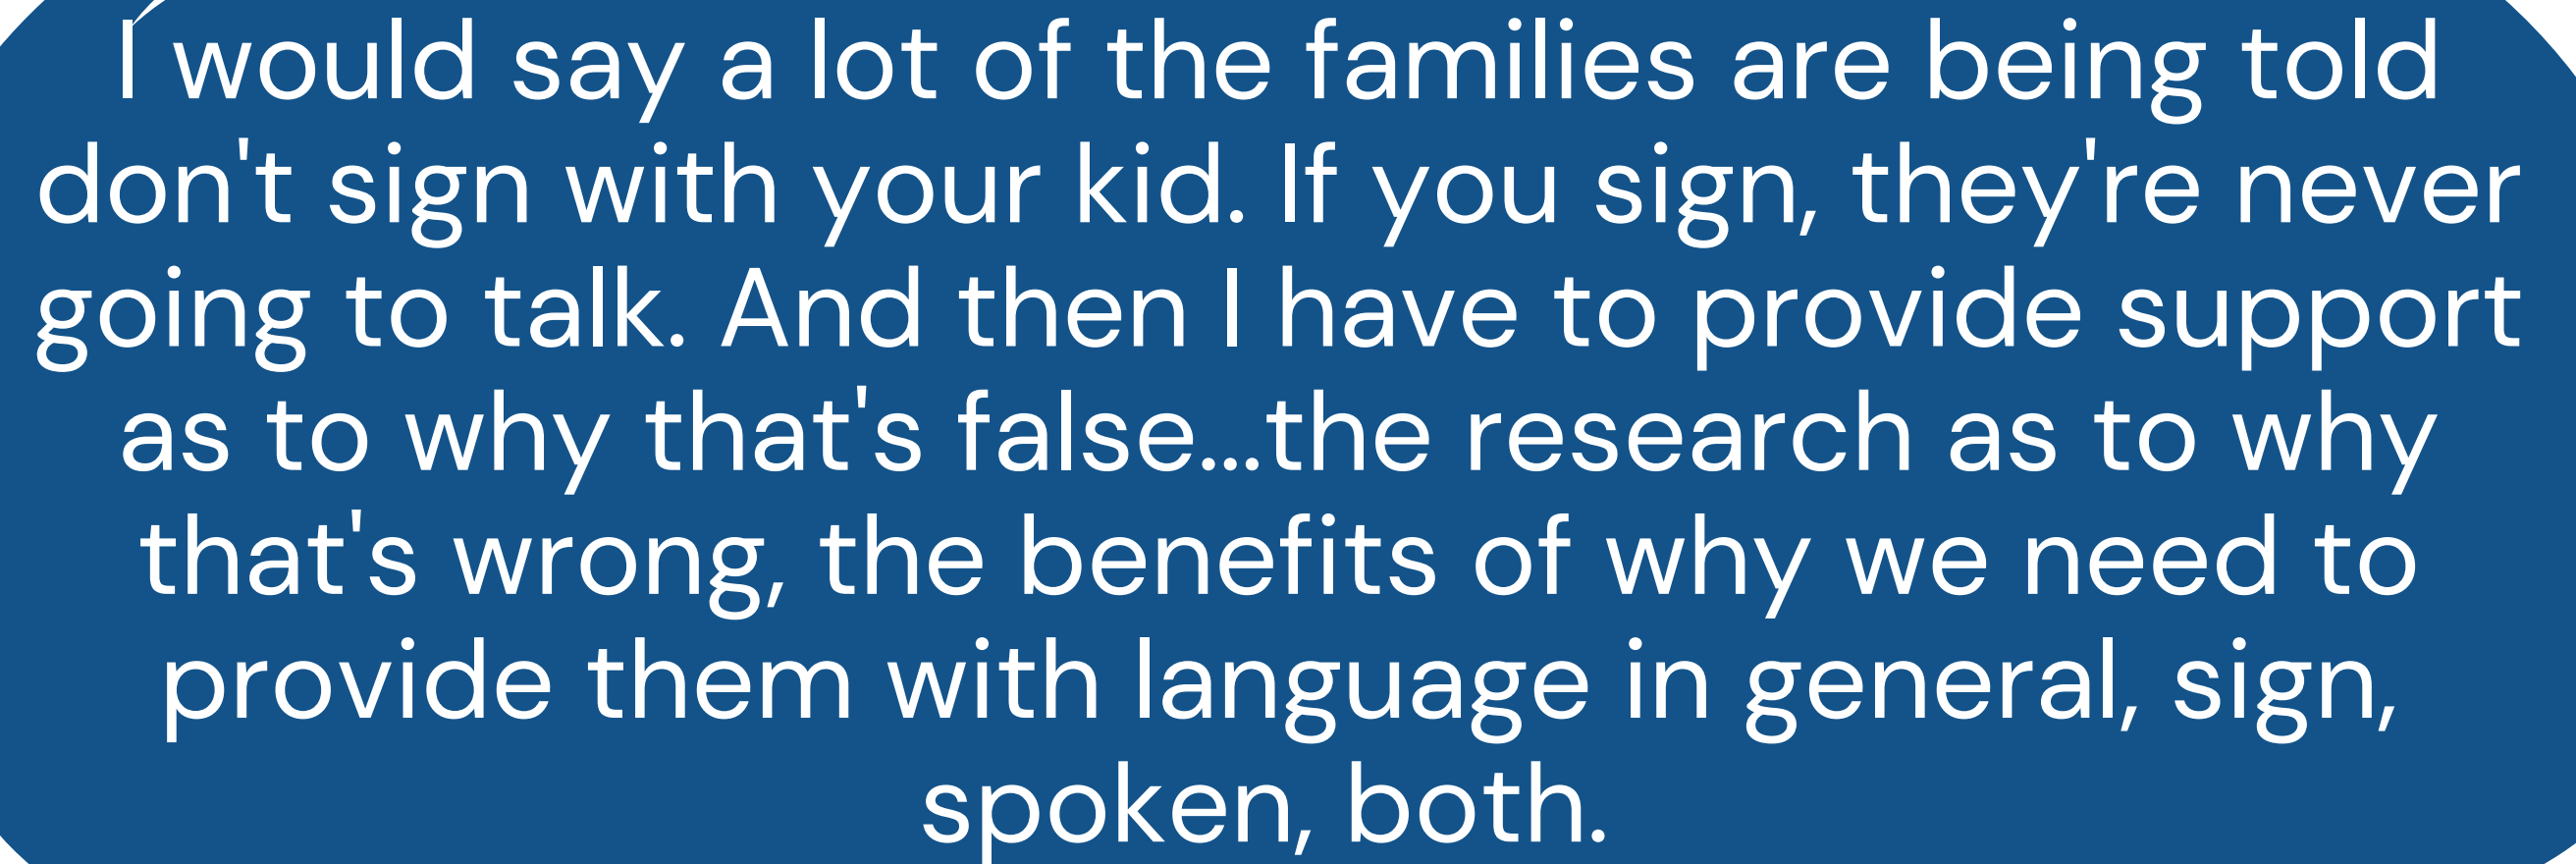

- Decision making is a dynamic process (DesGeorge, 2016).
- Revision happens frequently (Young, 2002).
- Parents have limited ability to interpret and understand results at the time they make initial decisions about technology and communication (Li, Bain, & Steinberg, 2003).

What this means:

- Allow for families to change their minds!
- Give information and TIME to process and gather additional information before requiring decisions.
  - Balance of progression through a system and urgency to move things quickly.
- Parents generally want to know what you think and how you would advise them to move forward. Be cognizant of the power of that influence.

# WHEN ASKED ABOUT PROFESSIONAL BIASES...

I would say a lot of the families are being told don't sign with your kid. If you sign, they're never going to talk. And then I have to provide support as to why that's false...the research as to why that's wrong, the benefits of why we need to provide them with language in general, sign, spoken, both.

# RESEARCH THEMES

## Perspectives on Deafness

Geographic location and service provision setting may impact perspectives on deafness (disability vs. identity).

## Advocacy and Collaboration

Examine your community (geographical and virtual) for connections as a source of information.

Cultural sensitivity is critical; recognize the impact of culture.

## Professional Practice and Development

Acknowledge gaps and sources of information.

Consider how you choose to share information. Does it reflect your professional experience and priorities?

## Language, Communication, and Identity

Recognize how your academic, personal, and professional background impact the words you use to describe identity and language.

It is not possible to be without bias.

# WHEN ASKED ABOUT TERMINOLOGY

I see why it's important to indicate the [medical diagnosis] but then to talk about calling it a hearing difference or hearing level versus hearing loss.

I think it is important, especially for the itty bitties who just started their life, we don't like the idea of them having a loss of something, right?

Their life has just started. They're going to gain everything in the world.

# DOCUMENT REVIEW

## COLLECTED DOCUMENTS

Requested documents from EI professionals that they use regularly with families in their work

## IDENTIFIED UNIQUE DOCUMENTS

Compared documents and identified 5 unique documents

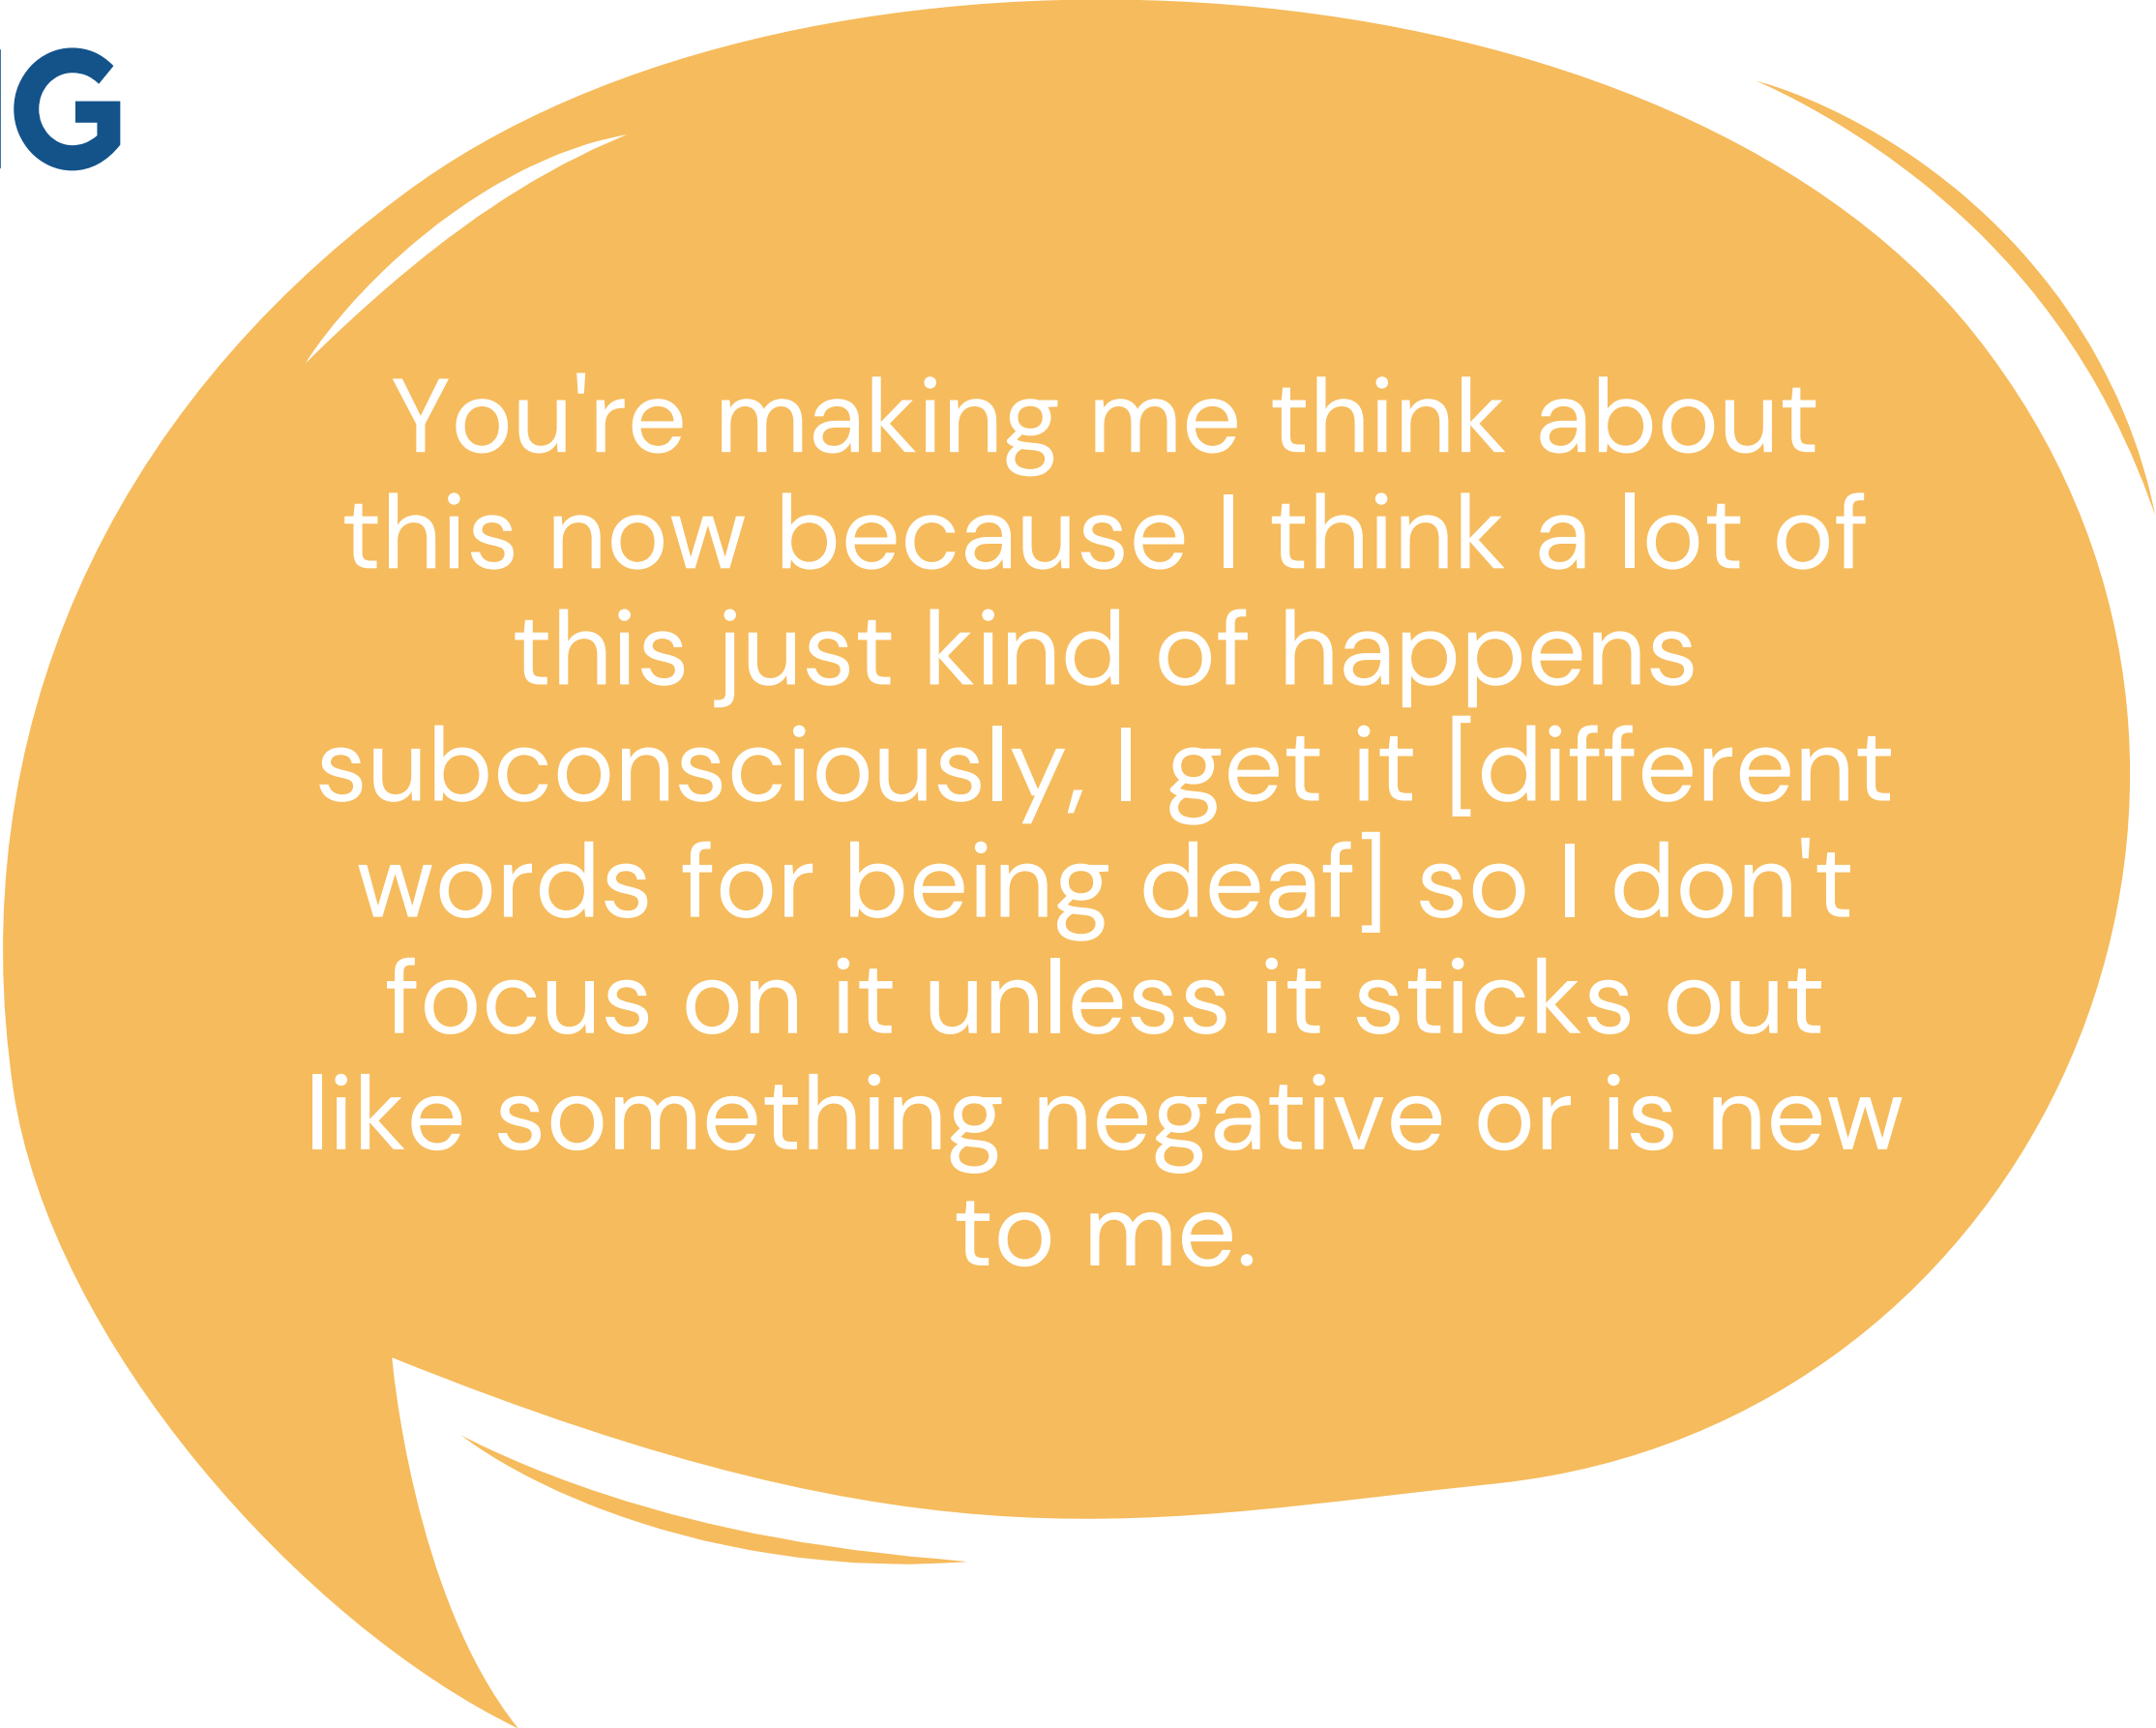

## COUNTED TERMS

Counted which words for being deaf were used in each document

# WHEN ASKED ABOUT SHARING RESOURCES

You're making me think about this now because I think a lot of this just kind of happens subconsciously, I get it [different words for being deaf] so I don't focus on it unless it sticks out like something negative or is new to me.

# SELF REFLECTION

I have participated in discussions about professional bias.

The resources my field shares with families are free from bias.

I am comfortable communicating about my professional biases with my colleagues and other professionals I work with.

I am comfortable communicating about my professional biases with the families I work with.

# QUESTIONS TO TAKE WITH YOU:

Who in my network  
can I use as a  
resource for topics I  
am less familiar?

What biases exist  
within my field? In  
what ways can I work  
to challenge them?

How can I help families  
identify their next steps  
in a balanced and  
supportive way?

What systems or  
processes are in place  
to support families who  
change their minds?
